"Toward Future Research on Biodiversity in Asian region"

1) Developing programs for fostering young scientists

- Long-term or permanent career for biodiversity researchers
- Long-term National Biodiversity Research Program
- National level commitment policy and funding agency for young scientists
- Capacity building on all group living organisms:
Minor Phyla
- Sufficient incentive for young researcher

"Toward Future Research on Biodiversity in Asian region"

2) Identifying challenges for improving the research environment

- Inventory, taxonomy, survey and monitor for living organism is still needed
- Compilation of available knowledge and identification research issues
- Sustainable management approaches for living resource: local knowledge, Habitats
- Poorly known habitats
- Biology and Ecology for important or hot issue individual living organisms
- Appropriated technology for conservation

"Toward Future Research on Biodiversity in Asian region"

3) Establishing a cooperative framework for building a research network

- Regional exchanged staffs and information
- Standardized methodology for living resources research works
- Sharing knowledge
 - Senior to Junior/ Professor to student
 - Knowledge providing by Seminar/ workshop
 - International Symposium for the Regional
- Biodiversity Database system for the Asian Regional Country

Thank you very much
Sawaddee Krup
