

Tokushima University (University Functions to be Enhanced: 1. Boost academic excellence in specific areas of the university's strength, 2. Generate innovation than can help solve global issues and advance societal reform, 3. Take a lead in resolving regional issues through collaboration with regional communities.)

Participants : Utsunomiya University, Osaka Metropolitan University, Shiga University of Medical, Science, Kobe Pharmaceutical University, National Cerebral and Cardiovascular Center, Technion-Israel Institute of Technology, Kamiyama Marugoto College of Design, Engineering and Entrepreneurship

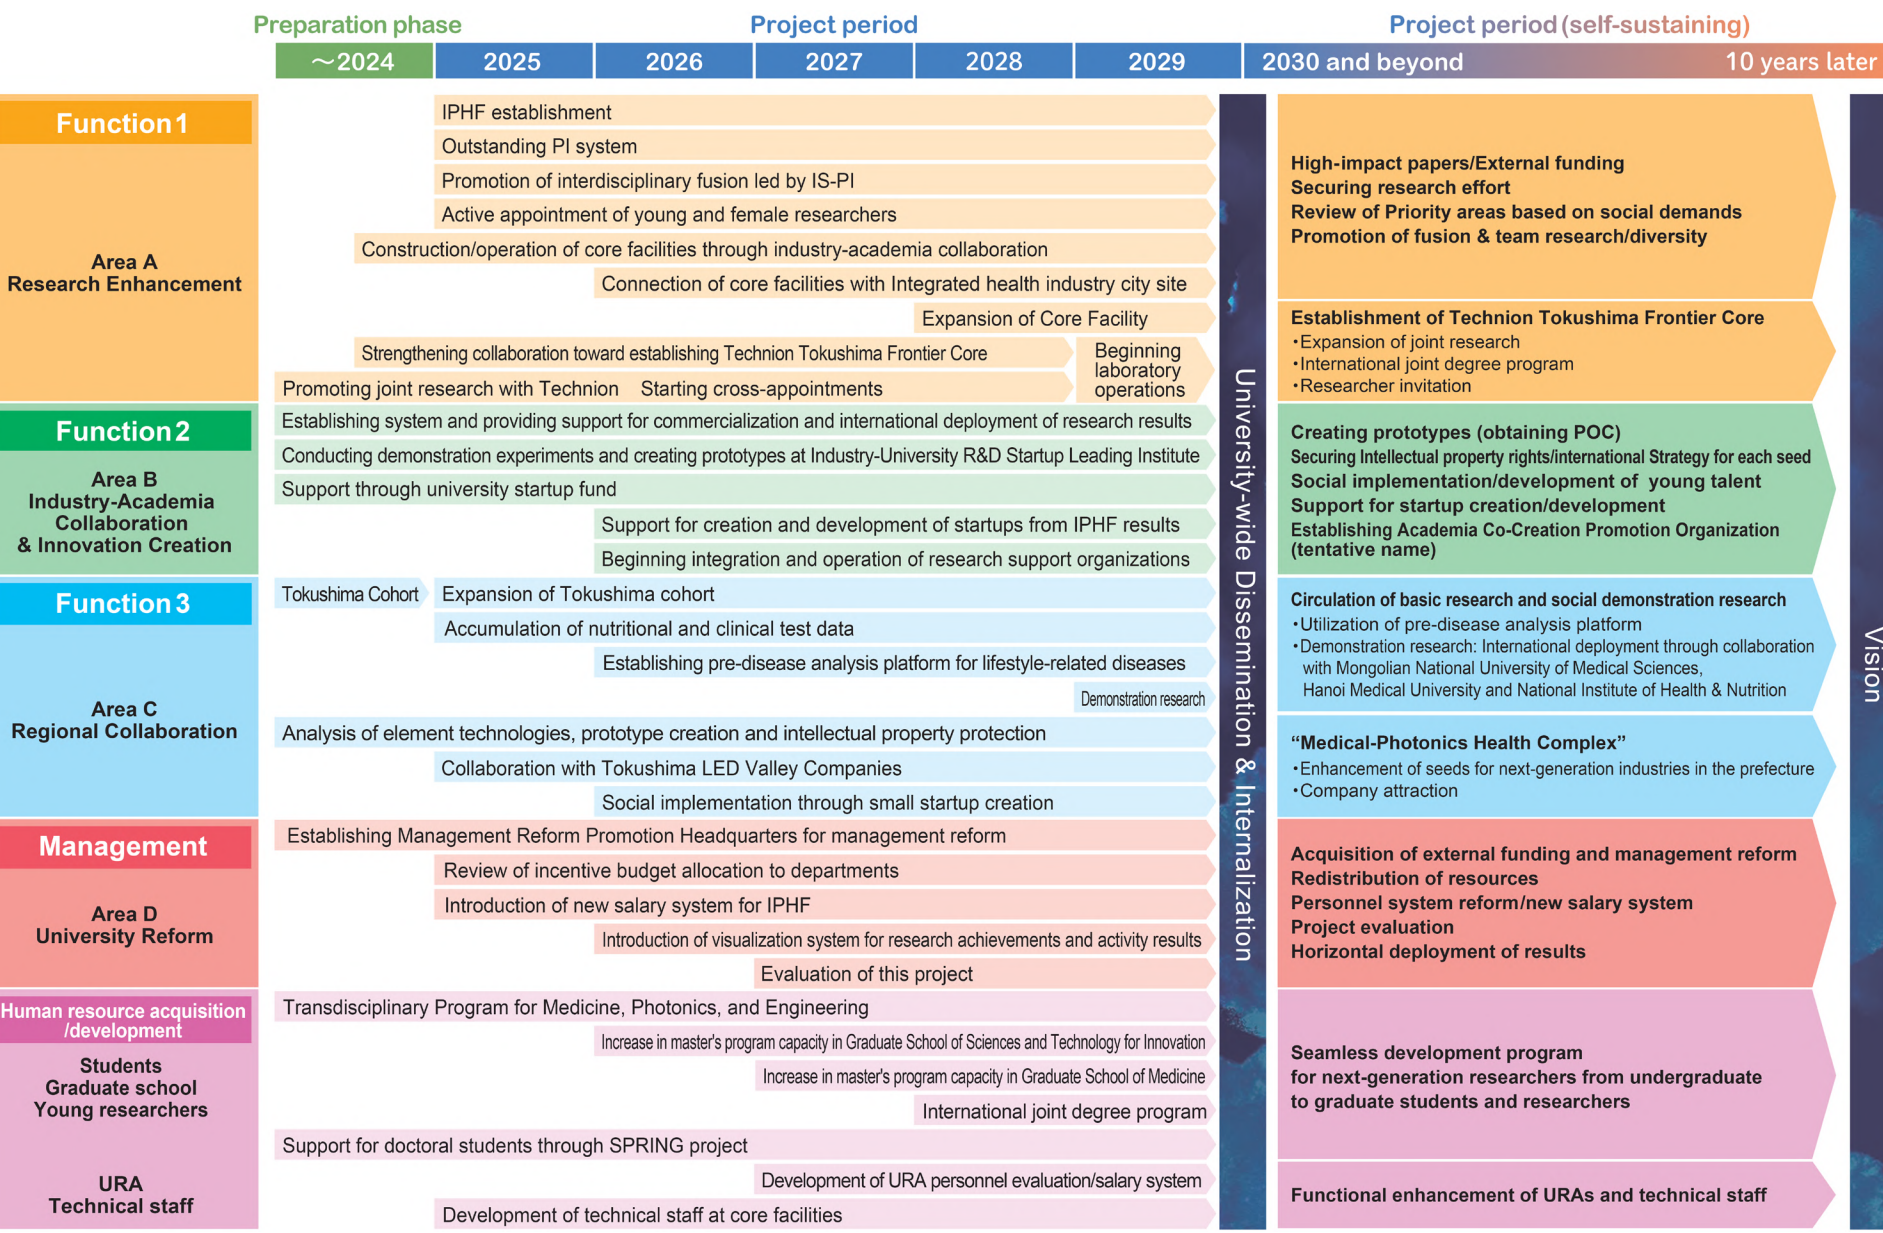

Summary

We will develop into a research university that continues to produce innovations that contribute to the realization of a creative super-aging society. We will achieve this by establishing a circulating pathway of implementation in society centered on basic research and domestic and international startups. This approach will be based on the fusion of knowledge from Tokushima University's four key initiatives—"Photonics," "Chronic Inflammation Research," "Nutrition Science," and "Information Science."
