The human population on Earth is increasing dramatically, leading to increased consumption of natural resources and rapid loss of wildlife habitats and species. Despite the important link between humans and other species of plants and animals that share our ecosystem, we do not sufficiently consider and act upon the conservation of our natural environment. In this lecture, I will discuss the importance of wildlife conservation and how the application of science can help us better understand the issues that are threatening our wildlife today. I will share my personal research experiences and motivation for a career in research and conservation.
