- Lecture summary (講演概要): Please summary your lecture 200-500 words.

The human population is increasing dramatically, leading to overharvesting of natural resources, rapid loss and fragmentation of wildlife habitats and extinction of species. Despite the important link between humans and other wildlife that share our ecosystem, we do not sufficiently consider the conservation of our natural biodiversity. In this lecture, I will discuss the importance of wildlife conservation and how the application of science can help us better understand the issues that are threatening our wildlife today.
