My research is about human-robot interaction (HRI). Nowadays, many kinds of robots are working around our lives. A robot vacuum cleaner represented as Roomba has been used by mainly young people, and a pet robot represented as AIBO has already been commercialized. In transportation, autonomous driving has come to draw a lot of attention. It is near to have a robot friend like DORAEMON. My research is at work to connect between human and robot. I will show your students some video that I developed at my previous company and introduce autonomous driving techniques that I am working on now.
