The lecture on climate change and SDGs highlighted the global concerns related to both climate change and SDGs, and how their activities can be synergised for a more healthy and finance effective implementation of both. It showed how the challenges being discussed by climate change and SDGs fora are almost similar and there could be similar methods to tackle them. After presenting a history of environmental events starting from the Rio Earth Summit in 1992, I acquainted the students with recent climate agreements and sustainable development goals. I provided examples of climate plus sustainable actions from other parts of the world and gave five way-forwards to make this possible at a national level. I motivated them for behavioural changes and to become agents of change themselves to contribute to solving the sustainable development and climate concerns.
