Abstract: As a phycologist my research work focuses on the study of taxonomy, phylogeny, ecology, biogeography, and evolution of marine seaweeds. My work consists on the first place in the observation and collection of benthic marine seaweeds. I use molecular and morphological tools to define the identity and systematics of marine seaweeds. Using large global datasets I study the evolution and biogeography of marine seaweeds. In other words, I aim to elucidate when and where marine seaweeds evolved and dispersed. Finally my work focuses on the biotic
